PUBLISHERS' NOTICE.

IN presenting their new Catalogue, the undersigned would call attention to the large increase in their list of Text-Books, by the addition of the whole list of books published by the late firm of PRATT, OAKLEY & Co., thus making their series worthy of the special attention of teachers, the friends of Education, and literary men throughout the country. The critical notices of the press, and the testimonials of those who have made themselves intimately conversant with the system on which these books are constructed, will command the respectful consideration of intelligent and discriminating men. But the Publishers wish that the books themselves should be subjected to a careful scrutiny by those who are practically engaged in the work of instruction; and to facilitate such an examination, and to bring these works directly into comparison with any others now before the public, they will send any of their text-books (except the Exhibition Speaker, which is 75 cents by mail) prepaid by mail, on receipt of one half the prices annexed.

We invite correspondence in regard to the introduction of our School Series, promising terms which shall be satisfactory.

The retail prices are annexed to each book, from which we make a liberal discount to Dealers, School-

368861

Teachers, Clergymen, etc. ; and we solicit orders for the books of other Publishers, both School, Religious, and Miscellaneous, which we obtain freely in exchange for our own books, and offer on very liberal terms.

This Catalogue will be sent to the friends of Education throughout the country ; and we solicit return Catalogues and Circulars of Literary Institutions, which we keep on file for reference. Our friends we shall be glad to see at our new store, No. 335 Broadway, corner of Worth St., when they visit New York.

In conclusion, we would express our acknowledgments to State and County Superintendents, Trustees, Teachers, and others, for their patronage and kind efforts in behalf of our Series.

SHELDON AND COMPANY.

SCHOOL AND COLLEGE TEXT-BOOKS

PUBLISHED BY

SHELDON AND COMPANY,

NEW YORK.

BULLIONS' SERIES OF GRAMMARS, ETC.

Practical Lessons in English Grammar and Composition.

For young beginners, (introductory to "Principles of English Grammar.") 25 cents.

Principles of English Grammar. A brief but comprehensive work for Common Schools. 50 cents.

Introduction to Analytical English Grammar. This little work is the Practical Lessons, so enlarged as to be what its title implies. 30 cents.

Analytical and Practical English Grammar. A larger work for Academies, High Schools, etc. 60 cents.

Progressive Exercises in Analysis and Parsing. Adapted to both Grammars. 15 cents.

Latin Lessons, with Exercises in Parsing. 60 cents.

Prepared by GEORGE SPENCER, A. M., as introductory to

Principles of Latin Grammar. New edition. \$1.00.

Latin Reader. With Introduction on Latin Idioms, an Improved Vocabulary, etc. \$1.00.

Exercises in Latin Composition. Adapted to the Latin Grammar. \$1.20.

Key, separate, for Teachers only. 50 cents.

Cesar's Commentaries. With Notes and References revised. \$1.00.

Sallust. With Notes and References. \$1.00.

Cicero's Orations. With Notes and References to Andrews' and Stoddard's, as well as to Bullions' Grammar. \$1.13.

Latin-English Dictionary. With Synonyms. 1014 pages. \$3.00.

First Lessons in Greek. Introductory to the Grammar. 70 cents.

Principles of Greek Grammar. New Edition. \$1.13.

Greek Reader. With Introduction on Greek Idioms, Improved Lexicon, etc. \$1.75.

Cooper's Virgil. With valuable English notes. \$2.00.

The books of Dr. Bullions' series have been several years before the public, and have met with the approval of most competent judges. They are favorite text-books in schools, academies, and colleges throughout the United States and Canada, and to the following peculiar excellences of these books teachers are respectfully invited.

These books are manufactured in a neat and most substantial manner, which renders them durable and economical.

Each Grammar contains an abridgment of itself within itself, consisting of the leading and general principles of Grammar, distinguished by being printed with the largest type used in each book.

As the leading principles of all languages are substantially the same, the arrangement in this series of Grammars is the same in all — the definitions and rules are expressed as far as possible in the same words. In this way one grammar becomes a useful introduction to another; and when the English is thoroughly studied, the labor of mastering the others, Latin and Greek, is more than half accomplished. By this arrangement Comparative Grammar becomes an interesting and profitable study.

The method of reference in these books from one to another, for the sake of illustration and comparison, and also from one part of the same book to another, by means of running numbers, is *peculiarly useful and convenient*.

In large schools, economy of time is a matter of great importance, and this object has been specially kept in view in the preparation of these books. The system of parsing here presented is at once clear, comprehensive, and concise, in the English Grammars especially; and the clear analysis of sentences in connection with parsing will be found a most pleasing and useful exercise. To the English Grammars are annexed Appendices, in which several controverted points are critically discussed, and to these the attention of Teachers is earnestly invited.

BULLIONS' ANALYTICAL AND PRACTICAL GRAMMAR OF THE ENGLISH LANGUAGE. The continued use of this book, after trial in many of our best schools, in preference to other works of the same kind, is the best test of its merit, and of its adaptation to the purpose for which it was intended. The attention of teachers and others interested in making a selection of the best text-books for schools and academies is respectfully requested, especially to the

following points, which are deemed essential to a good text-book on English Grammar :

1. *Its conservative character.* While everything really an improvement in statement or method has, in the preparation of this work, been introduced, *ephemeral* novelties and *crude* theories have been carefully excluded.

2. In the *arrangement and classification* this work differs but little from Grammars now long considered among the best. Still, even here it is believed some improvement has been made. The "Article," long and justly regarded as a distinct part of speech, but recently, by some, merged in the adjective, with which it has but little in common, here retains its place, but is treated of *after* the noun, of which it is an adjunct, and its true nature and office are more accurately stated. The verb, especially, has been freed from much of that obscurity and difficulty in which unmeaning and unnecessary distinctions had involved it. Bullions' distinction is obvious, easily made, easily understood, and is the only one of which any use is made in the construction of the language.

3. In the *Definitions and Rules* to be committed to memory, the greatest brevity, accuracy, perspicuity, and euphony have been studied.

4. *Its comprehensiveness.* This work is a complete treatise, in a compact form, on the whole subject. It is a digest of everything of any value in the largest works for the use of schools, and solves or discusses more curious and perplexing questions than any work of its size.

5. *Its practical and intellectual character.* It has a sufficient and well-devised course of exercises for practice from first to last, to *work* the principles of the text, in their practical bearing, into the mind of the learner. Such a course of exercises, with skilful drilling, excites attention, awakens thought, throws light into the understanding, leads the pupil to feel that he is making progress, and stimulates him to cheerful and successful efforts in pursuing his studies.

6. *Analysis.* The subject of Analysis is clearly presented in its appropriate place, and thoroughly applied.

7. *Parsing, both Etymological and Syntactical.* The method of parsing, an exercise indispensable to a correct knowledge and use of the English language, which is here exemplified, will be found much more simple, comprehensive, accurate, and economical of time, than that which is commonly pursued. See, for examples, nouns 182, p. 35, and specimen 581.

8. Under the leading *Rules of Syntax*, which are few in number, and serve as general heads, subordinate rules and observations, where needful, are arranged so as to make each topic complete in itself, and the whole is sought to be rendered familiar by numerous

exercises in False Syntax under each rule, and also others of a promiscuous character at the end.

9. The critical discussion of difficult or unsettled points in the Appendices at the end, and to which there are appropriate references in the text, will be found useful in directing the attention of some to inquiries of this kind, and, it may be, in assisting others in coming to a just conclusion respecting the matters of which they treat. Finally — as a text-book, this work claims to be not inferior to the best extant; it lacks nothing useful possessed by any of them, and contains some features not to be found in others. It is less incumbered with irrelevant matter, requires less time and labor on the part of pupils to make good proficiency in this branch of education, and *saves much time and labor* to the teacher in conducting the studies of learners pleasantly to a successful result.

“I have used Bullions' Analytical and Practical Grammar of the English Language for several years past with increasing satisfaction. The arrangement of subjects is remarkably well adapted to the purposes of the school-room, any topic requiring examination being in its proper place, and easily referred to by teacher or pupil. The *habit of reference* for authority upon any question that may arise in the course of a recitation, I esteem as most valuable, and any arrangement that encourages this habit is no small recommendation.

“I have almost uniformly found principles or facts given in this work throwing light upon the various questions that arise in the course of instruction given in this school — showing not only that the subjects are *well arranged*, but that they are discussed with *sufficient fulness*.

“The definitions given by Dr. Bullions are clear and concise, the Rules of Syntax accurate, and their application clearly pointed out and happily illustrated by examples, many of which contain maxims worthy to be treasured in the memory. On the whole, I consider this Grammar as remarkably well adapted to promote the object at which it aims — and most cheerfully recommend it to any who desire a Practical Grammar.” — *Geo. Allen, Jr., Master of Hancock School.*

“I fully concur in the above recommendations of Mr. Allen.” — *Jas. A. Page, Master of Dwight School.*

“In reply to your inquiries, I am happy to assure you that we find Dr. Bullions' English Grammar an admirable text-book. We have used it for many years with increasing satisfaction. We deem it superior to any other in the treatment of the subject, and the accuracy and fulness of the detail.” — *Mrs. Sarah L. Willard, Troy Female Seminary.*

“Bullions' Grammar, after a careful examination, has been adopted as a text-book in our school. It seems to be a most thorough and practical treatise on English Grammar, and by its arrangement well adapted for the instruction of large classes. Our good opinion of this book, we confidently expect, will be confirmed by the impartial trial in the class-rooms to which we intend to subject it.” — *John G. McNary, Principal of New York Grammar School No. 11.*

NORMAL MATHEMATICAL SERIES.

Stoddard's Juvenile Mental Arithmetic, by JOHN F. STODDARD, A. M., for Primary Schools. 72 pp. Price 13 cents.

Stoddard's American Intellectual Arithmetic, by the same. An extended work, designed for Common Schools, Seminaries, and Academies. 164 pp. Price 20 cents.

Stoddard's Practical Arithmetic, by the same, embracing every variety of exercises appropriate to written Arithmetic. 299 pp. Price 40 cents.

Key to Stoddard's Intellectual and Practical Arithmetics, in one book. Price 50 cents.

Schuyler's Higher Arithmetic. A new and original work for Colleges, Seminaries, Academies, and High Schools, by A. SCHUYLER, of Ohio. Price 75 cents.

Stoddard and Henkle's Elementary Algebra, for the use of Common Schools and Academies, by JOHN F. STODDARD, A. M., and Professor W. D. HENKLE, of Ohio Southwestern Normal School. Price 75 cents.

Key to Stoddard and Henkle's Elementary Algebra. Price 75 cents.

Stoddard and Henkle's University Algebra, for High Schools, Academies, and Colleges, by JOHN F. STODDARD, A. M., and Professor W. D. HENKLE. 528 pp. Price \$1.50.

Key to Stoddard and Henkle's University Algebra (in press).

The Normal Series of Mathematical Text-Books have many features which justify the high estimation in which they are held by Teachers. The authors of these books being successful Instructors, they have prepared text-books just suited for Schools and Academies, where it is desired that the sciences of Arithmetic and Algebra shall be taught understandingly, so that pupils may with facility apply them to the practical purposes of life. The use of these books induces careful attention and continuous application of the mind, at the same time relieving study of its usual irksomeness by such lucid explanations and a proper presentation of the subjects as make them apprehended easily by scholars.

Stoddard's Intellectual Arithmetic has done very much to advance education in the schools of this country. By it the minds of pupils can be so trained in their development as to give them a power of thought not to be attained probably by any other study in our schools, certainly by none other in the same time, and of so much service in business affairs. The study of Mental Arithmetic according to the books of this author cultivates such a method of direct logical reasoning, as well as a clear, concise, and intelligible expres-

sion of the mode of analysis, that teachers should not fail to make a trial of it.

The practical and higher arithmetics of this series, wherever used, produce a result similar to the Intellectual Arithmetics. They present the subject in such a manner as to have it clearly understood, explaining whatever may appear difficult by a thorough analysis, that the pupil may understand *why* by a rule or direction he is required to do as there stated. The language is plain, concise, and sufficient, which is no small merit in school books.

So much has been said by Teachers in commendation of Stoddard and Henkle's Algebras, which form part of the Normal Series, that it is supposed the merits and peculiarities of these text-books are generally known. The Elementary Algebra explains the elements of this science in a very simple and practical manner, and makes the subject pleasing and useful apparently to young pupils. The University Algebra is a thorough treatise, clear and agreeable in its language, philosophical and distinct in its plan, and in examples so full as to exceed any other book of its kind. Examples in the Arithmetics and Algebras of this series are varied and abundant; problems are also numerous.

Schuyler's Higher Arithmetic is a complete treatise of 427 pages, exhausting the whole subject, and prepared for higher classes. It is scientific and complete, yet simple, methodical, and exact. The concise manner of this book is such, that more is contained on its pages than is within any other Arithmetic published. Every teacher should have a copy of this work, and indeed no library should be without it.

These books are well made, neat in appearance, durable, and cheap in price. It is to the interest of schools that the Normal Mathematical Series be carefully examined.

"I have examined Stoddard and Henkle's University Algebra. It is a thorough and elaborate work. It combines clearness and simplicity in its method and illustrations, and constitutes a valuable addition to the mathematical works of the day." — *Cyrus Nutt, A. M., Professor of Mathematics in the Indiana Ashbury University.*

"I have examined 'Stoddard's American Intellectual Arithmetic,' and cheerfully recommend it to teachers and parents as a valuable elementary work, and one well adapted to the wants of pupils in the first stages of arithmetic. It is constructed upon sound and practical principles, and will be found an important addition to the text-books now in use in our Common Schools." — *Hon. Samuel S. Randall, Supt. of New York City Schools.*

"Stoddard's Arithmetical Series is now in general use in the schools of this county. They have stood the test for four years as the text-books in Arithmetic in our schools, and are considered by our teachers superior to any others now before the public." — *Mr. S. A. Torrill, late Superintendent of Public Schools of Wayne County, Pa.*

BROCKLESBY'S ASTRONOMIES.

Brocklesby's Common School Astronomy. 12mo. 173 pages.
Price 60 cents.

Brocklesby's Elements of Astronomy. By JOHN BROCKLESBY,
Trinity College, Hartford, Conn. 12mo. Fully illustrated. 321 pages.
Price \$1.25.

In this admirable treatise the author has aimed to preserve the great principles and facts of the science in their integrity, and so to arrange, explain, and illustrate them that they may be clear and intelligible to the student.

Several peculiarities are contained in this text-book, which it is thought will be of material service to the pupil in obtaining a knowledge of the science. The most important of these we shall now briefly notice :

I. It is usual, in most text-books on this science, to explain many astronomical phenomena by the *apparent*, and not by the *real* motions of the celestial bodies. In this treatise the *opposite course is taken*, wherever practicable ; the explanations being based upon the *real motions* of the heavenly bodies. By pursuing this method, the subsequent acquisitions of the scholar are built upon the *truth itself*, and not upon what *appears to be true*.

II. The *mode* of ascertaining the *distances* and *magnitudes* of the heavenly bodies is so simplified that any student, who understands the *rule of proportion*, can readily comprehend it.

"We take great pleasure in calling the attention of teachers and students to this truly excellent book. It contains 321 pages, and is printed from fair type and on good paper. Both the plan and execution of the whole are equally admirable. It is not a milk-and-water compilation, without principles and without demonstration. It contains the elements of the *science* in their proper integrity and proportions. Its author is a learned man and a practical instructor, as the author of every school-book should be. The style is a model for a text-book, combining in a high degree perspicuity, precision, and vivacity. In a word, it is the very best elementary work on Astronomy with which we are acquainted." — *Connecticut Common School Journal*.

"This is a compact treatise of 320 pages, containing the elements and most of the important facts of the science clearly presented and systematically arranged ; it is very finely illustrated. It is worthy of a careful examination by all who wish to secure the best text-books." — *Ohio Journal of Education*.

"A beautiful text-book of a noble science ! The beauty and ingenuity of the numerous illustrations must captivate every reader's attention. We commend it to the examination of those who are seeking a text-book for their classes." — *Michigan Journal of Education*.

KEETELS' FRENCH METHOD.

A New Method of Learning the French Language. By JEAN GUSTAVE KEETELS, Professor of French and German in the Brooklyn Polytechnic Institute. 12mo. Price \$1.00.

A Key to the New Method in French, By J. G. KEETELS. 1 vol. 12mo. Price 40 cents.

This work contains a clear and methodical *exposé* of the principles of the language, on a plan entirely new. The arrangement is admirable. The lessons are of a suitable length, and within the comprehension of all classes of students. The exercises are various, and well adapted to the purpose for which they are intended, of reading, writing, and speaking the language. The Grammar part is complete, and accompanied by questions and exercises on every subject. The book possesses many attractions for the teacher and student, and is destined to become a popular school-book. It has already been introduced into many of the principal schools and colleges in the country.

The following testimonials have lately been received : —

"I have examined 'Keetels' New Method of learning the French Language,' and find it admirably adapted for conveying a thorough knowledge of the French language. It is an easy and sure method of both writing and speaking French with accuracy and elegance." — *Daniel Lynch, S. J., Director of Studies in Gonzaga College, Washington.*

"The 'New Method of Learning the French Language,' by Professor Keetels, appears to be exceedingly well adapted as an introduction into the study of French. It is emphatically a practical book, and bears the mark that it has resulted from the author's own experience in teaching. I shall take pleasure in soon giving it the test of a trial in my own Institute." — *Oswald Seidensticker, Principal of the Commercial and Classical Institute, Philadelphia.*

"I have examined several works designed for pupils studying the French language, and among them 'Keetels' New Method of the French.' The last work I consider superior to any other which I have examined, and shall use it in my classes as the best text-book upon the subject." — *S. A. Farrand, Trenton, N. J.*

"I take great pleasure in adding my testimony to the value of 'Keetels' New Method of Learning the French Language,' as a school book. It will make its way, successfully, among the multitude of similar books, as well by its typographic as its scholastic merits. I shall introduce it next term into my school." — *Joseph McKie, Teacher of French, Newark, N. J.*

"I have examined 'Keetels' New Method of Learning the French Language,' and take pleasure in recommending it as a work admirably adapted for the purpose." — *John Early, President of Georgetown College.*

LOOMIS'S PHYSIOLOGY.

Elements of Anatomy, Physiology, and Hygiene.

By Prof. J. R. LOOMIS, President of Louisburgh University, Penn. Beautifully illustrated with colored plates, and original drawings. Price 75 cents.

"I have examined with some care the Physiology of President Loomis. It seems to me clear, concise, well arranged, and in all respects admirably adapted for the purposes of a text-book in schools and colleges. It has been used by the classes in this University with entire satisfaction."—*Rev. M. B. Anderson, D. D., President of Rochester University.*

"We have used Loomis's Physiology in our school, and cheerfully recommend it as a work of real merit. Its arrangement is superior, and the author has anticipated the wants of the school-room. He has done much to draw the attention of teachers to the importance of the study, and the general adoption of his treatise, as a text-book in our schools, would be an advance in the work of Education."—*John G. McMynn, Principal of Racine High School.*

"I have carefully examined Loomis's Physiology, and consider it the best work which has yet been published for the use of schools. I shall commend it at the next meeting of the teachers of our district."—*A. J. Prosser, Cambria Co., Penn.*

Lambert's Plates of Pictorial Anatomy.

These large illustrations are carefully drawn from good authorities, and printed in colors, on sheets of strong paper 37 inches long by 22 inches wide. They form an important part of the necessary furniture of a school, and are of great advantage in connection with any text-book on physiology, etc. The cheapness of them places them within the reach of any school. Price, mounted, \$6.00.

PLATE 1. Represents the skeleton of the Human Figure 33 inches high; also the Hand, the Foot, and the Vertebrae, on a larger scale.

PLATE 2. Human Figure 33 inches high, developing the muscles, tendons, etc.

PLATE 3. Human Figure 33 inches high, representing the nervous system, also its combination with the muscles.

PLATE 4. Contains 16 charts and diagrams, elucidating the peculiar properties of the eye, and its adaptation to light.

PLATE 5. Human Figure 33 inches high—a beautiful presentation of the arteries and veins in combination with the muscles.

PLATE 6. Illustrates the circulation of the blood through the internal organs of the body, and contains also fine illustrations of the heart, lungs, stomach, liver, etc.

These plates can be sent by mail in sheets, postage paid, for \$5.00.

PEISSNER'S GERMAN GRAMMAR.

A Comparative English-German Grammar, based on the affinity of the two languages. By Prof. ELIAS PEISSNER, late of the University of Munich, now of Union College, Schenectady. New edition, revised. 316 pages. Price \$1.00.

The author of this popular book has, during a long experience in teaching, deduced principles on which are prepared this Grammar of the German language. For the direct attention requisite to learn a new language, one point at a time is clearly presented to, and impressed on, the mind by examples and exercises.

As the student will naturally express ideas in the German language similar to the manner of his own, the study of the German is made *comparative*, and guided, when possible, by rules formed on its relation to the English Grammar. Therefore, in order to preserve this unity of attention and to make this comparative study easy, this Grammar is based upon the affinity of English and German. It presents to the student his own word, as it were, and shows the changes which this word takes by inflection and position in the German language.

The general desire to read, in the language being studied, is provided for immediately after the second part by interesting sentences, in which occur only principles already explained, and thus the attention is directed to etymology. Each division of this reading-matter is followed by a *conversation*, with only such words as have just been given in order to fix in the memory words which are most frequently used.

PENMANSHIP.

Nelson's Introduction to Penmanship. Designed for the use of Schools. In Five Books, consisting of an Elementary, and No. 1, for Beginners; No. 2, for Boys; No. 3, for Girls; and No. 4, Coarse Hand. Each 12½ cents.

The Copies are all Lithographed, and not Stereotyped, like most other Copy-books in use, and thus, like the Daguerreotype of the face, an exact copy of the original is taken. But, in Stereotyping, the hair-stroke cannot be copied.

HOOKER'S PHYSIOLOGIES.

Hooker's First Book in Physiology. For Public Schools. Price 60 cents.

Hooker's Human Physiology and Hygiene. For Academies and general reading. By WORTHINGTON HOOKER, M. D., Yale College. Price \$1.25.

A few of the excellences of these books, of which teachers and others have spoken, are : 1st. Their clearness, both in statement and description. 2d. The skill with which the *interesting* points of the subject are brought out. 3d. The exclusion of all useless matter, other books on this subject having much in them which is useful only to medical students. 4th. The exclusion, so far as is possible, of strictly technical terms. 5th. The adaptation of each book to its particular purpose, the smaller work preparing the scholar to understand the full development of the subject in the larger one. 6th. In the larger work the science of Physiology is brought out as it *now* is, with its recent important discoveries. 7th. Some exceedingly interesting and important subjects are fully treated, which, in other books of a similar character, are either barely hinted at or are entirely omitted. 8th. These works are not mere compilations, but have the stamp of *originality*, differing in some essential points from all other works of their class. 9th. In beauty and clearness of style, which are qualities of no small importance in books for instruction, *they will rank as models*. 10th. The subject is so presented that there is nothing to offend the most refined taste or the most scrupulous delicacy.

There is added to the larger book a full chapter on *Hygiene*, questions for the use of teachers who desire them, and also a complete Index. The incidental remarks on Hygiene, occurring in the book, and the concluding chapter on that subject, present together a more thorough view of it than is given in any other School Physiology.

These books are text-books almost wherever they are known. The "First Book" is a text-book in the public schools of Boston, New York, Buffalo, and San Francisco.

"Professor Hooker's work on Physiology has been in use for the last year in the Normal School in this city, and it gives me great pleasure to express my convictions of its excellence as a text-book. In the course of my experience as a teacher I have used the books of various authors on the subject of Physiology, but the work of Professor Hooker satisfies me much more fully than any other that I have used. It has the double advantage of being accurately scientific in its matter and arrangement, and of being expressed in correct and elegant English, a combination of the highest importance, and yet seldom attained to the extent exhibited in this book. I know of no book for which I would be willing to exchange it."—*Richard Edwards, Esq., Principal of St. Louis Normal School.*

WEBB'S SERIES OF NORMAL READERS.

Normal Primer. By J. RUSSELL WEBB, A. M. Beautifully Illustrated. 12mo. 24 pp. Paper covers, 5 cents; stiff covers, 6 cents.

Webb's Cards, (three in number, printed on both sides.) For primary lessons in connection with 1st Reader. Price \$1.00 per set.

The Word Method Primer. Price 15 cents.

Normal Reader, No. 1. 12mo. 90 pp. Price 13 cents.

Normal Reader, No. 2. 12mo. 168 pp. Price 25 cents.

Normal Reader, No. 3. 12mo. 216 pp. Price 38 cents.

Normal Reader, No. 4. 12mo. 312 pp. Price 50 cents.

Normal Reader, No. 5. 12mo. 490 pp. Price 75 cents.

These Readers are used in many of the principal cities and villages throughout the United States, and are rapidly coming into use in the smaller towns of the country. Their merits have been fairly tested, and they have been pronounced superior to any series of Readers extant, not only for the improvement in the system of teaching, which is the WORD METHOD, but also in the high moral tone and inspiring character of the pieces selected.

"They are the best Practical Readers that have come under my notice; they are ALL and EVERYTHING they should be." — *Hon. S. S. Randall, Deputy State Superintendent of N. Y. Common Schools.*

"Webb's Readers are the best books of their kind for our schools." — *Hon. D. M. Camp, Ex-Governor of Vermont.*

"Having somewhat carefully examined 'Webb's Normal Readers,' I have no hesitation in saying I consider them to rank high among the best Practical Readers that have come under my notice. We have lately introduced two numbers into some of our public schools of this city, which have thus far given good satisfaction." — *D. S. Heffron, City Superintendent of Schools, Utica N. Y.*

"The day and age of the world in which a scholar is put through a year of alphabet preparatory to reading, is entirely past, and that teacher who is so utterly regardless of the time of his pupil, or so entirely ignorant of his own duties, as to pursue the old method of teaching the young in their first efforts to read, is totally unqualified for his position. You may think this is strong language; but having seen and felt some of the evils of the old system, I am confident it is no stronger than is deserved. As invaluable aids in the Word Method of teaching, I would say that Webb's Normal Cards and Series of Readers have been in use for the last six or eight years, and I have thought that the author should have a monument nailed to his memory in every school-house in the land, and benisons breathed upon his head from every fireside in the land — so much, in my opinion, has he done for the rising generation. We use the Normal Cards, Primers, First and Second Readers." — *E. W. Chesebro, Principal of Union School, Grand Rapids, Mich.*

COMSTOCK'S SERIES.

System of Natural Philosophy, re-written and enlarged, including latest discoveries, fully illustrated. Price \$1.00.

Elements of Chemistry. Re-written 1861, and adapted to the present state of the Science. Price \$1.00.

Comstock's Natural Philosophy, in addition to its widespread popularity in America, has been republished twice in Great Britain, the Edinburgh edition being edited by Prof. Lees of the Naval and Military Academy of that city, and the London edition being edited by Prof. Holbyn, of Oxford. Besides these two editions of the entire work, Dr. Comstock's Philosophy has been published in parts, in the form of scientific tracts, at a shilling each, for general circulation in England. We understand, also, that the work has been translated into German for the use of the public schools in Prussia.

Having thus undergone the critical examination of two professors of high attainments abroad, who have each corrected its errors, and added to its pages, and of whose labors we have no doubt the author has availed himself, we now offer this revised edition to the public with renewed confidence in its correctness, as well as its adaptation to the purpose for which the work is intended.

In order to justify the popularity of this book, nearly 1,000,000 copies of which have been sold, there has been incorporated into this edition, which is re-written, a great variety of subjects, including all the most important discoveries and improvements in the arts which are thought desirable for the acquisition of philosophical knowledge.

The following subjects and illustrations are added in the revised edition: Dick's Anti-Friction Press; The First Vacuum; Centrifugal Pump; Balloon and Parachute; Pump and Fire-Engine; Spheroidal Theory of Steam Boiler Explosions; Distillations; Twilight; Compound Microscope; Hydro-Electricity; Gasometer and Meter; Rotation of the Earth. The following subjects, here added, are illustrated by new drawings: Attraction of Gravity; Elasticity; Action and Reaction; Centre of Gravity; Inclined Plane; Hydrostatic Press; Barker's Mill; The Condenser; Barometer; Fire-Engine; Expansion and Circulation of Heat; Thermometer; Force of Steam; Reflection by Mirrors; Acoustics; Counter-Currents of Air; Vision; Astronomy; Electricity; Magnetism. Dr. Comstock's Chemistry is also carefully revised, with the addition of Modern Discoveries in this science.

"As an elementary work, requiring for its perusal no mathematical attainment, nor, indeed, any previous knowledge of Natural Philosophy, it is at once simple, intelligible, and in most parts familiar." — *Prof. Holbyn, of Oxford, England.*

MELVILLE'S SERIES.

Melville's Slate Drawing Cards. By FRANCIS MELVILLE. Designed for Primary Schools, are very simple and easily copied, at the same time teaching the elements of the art. The lines are white, on a black ground. Price 25 cents.

Melville's Drawing Cards, in 5 Numbers, each number containing 16 cards, with pamphlet of instruction, in a neat case. No. 1 contains lessons in Elementary Drawing, consisting of outlines of various forms for beginners. No. 2 contains lessons in Landscape Drawing, both in outline and shading. Several of the lessons are devoted entirely to examples in shading. No. 3 contains lessons for Drawing Flowers and Ornaments, commencing with the elements of the art. No. 4 contains lessons for Drawing the Human Head. Attention is given to the outlines of the features, the drawing of which is fully explained. No. 5 contains Finished Drawings of Landscapes, Figures, Animals, Fruits, etc. etc. Price 50 cents each.

Melville's Twelve Studies. Twelve Finished Drawings, printed in tints. Royal quarto size, in a neat portfolio. Price \$2.00.

The series comprises heads of Washington and Franklin, Landscapes, Figures, Flowers, Fruits, &c. Some of the studies are designed to be copied with two crayons.

Mr. Melville's long connection with the Public Schools as Professor of Drawing, is a guarantee of the value of his series. A few of the numerous testimonials received from teachers are given.

"Having had for some time practical experience in the use of Melville's Drawing Cards in Grammar School No. 30, I take much pleasure in recommending them to the immediate attention of teachers desirous of introducing a system of drawing superior to anything of the kind which has already come under my observation."—*E. McIlroy, Principal, New York.*

"I cheerfully concur in the foregoing recommendation of Melville's Drawing Cards."—*M. J. O'Donnell, Principal of Ward School No. 5.*

"The twelve superior lessons of drawing, originated by Mr. Melville, we have used in our advanced classes, and can cheerfully recommend them to the pupils of our Grammar Schools as being designed both for pleasure and improvement. It would afford us pleasure to hear of their general introduction."—*G. M. Watson and S. J. DeGrove, Female Grammar Department No. 13, New York.*

"Melville's Drawing and Slate Cards have been in use in Grammar School No. 18 for some time, and I am much pleased with both series, and prefer them to any yet introduced into the schools."—*Euph. Hirst, Principal.*

OLNEY'S GEOGRAPHY.

Olney's Geography and Atlas, revised and improved, by the addition on the Maps of the latest information and discoveries. New Plates and Woodcuts. Atlas, 28 Maps, quarto, 75 cents. Geography, 18mo. 304 pages, 50 cents.

Olney's School Geography, always remarkable for the simplicity and clearness of its definitions ; its thorough system of questions on the Maps, as well as its brief but intelligent descriptions of the various countries on the globe ; includes Latitudes and Longitudes, Introduction to Astronomy, Climates, Winds, Tides, Introduction to the use of the Globes, Problems, Ancient Geography, Exercises on the Charts of the World, and a Chronological Table of the more important geographical discoveries of modern times.

The Atlas contains twenty-four large, well engraved, and neatly colored Modern Maps ; Maps for those who study the Classics and read Ancient History ; fine Charts for the study of Physical Geography ; also, forty-eight tables of statistical and other important information.

These favorite text-books, of which more than a million of copies have been sold, are kept up to the times by the publishers, who add the latest geographical information on the large and beautiful Maps and in the Text-Books, so as to make them worthy of the claim that they are the best works for the study of Geography now published.

SHELL'S ARITHMETIC.

Schell's Introductory Lessons in Arithmetic. 12mo.
Price 20 cents.

Designed as an introduction to the study of any mental or written Arithmetic. It contains a large amount of mental questions, together with a large number of questions to be performed on the slate ; thus combining mental and written exercises for young beginners. This is a very attractive little book, superior to any of its class. It leads the pupil on by the easiest steps possible, and yet insures constant progress through Numeration, Addition, Subtraction, Multiplication, Division, the tables of Currency, Weights, and Measures.

"It is unnecessary to do more than to ask the attention of teachers to this work ; they cannot examine it impartially without being convinced of its superior merits. It will, no doubt, become one of the most popular of school-books." — *Geo. Payne Quackenbos, New York.*

GOLDSMITH'S SERIES.

Goldsmith's Copy Books, with Instructions, complete in five numbers, viz., No. 1, containing the letters of the Alphabet, with words suitably arranged for beginners. No. 2, Letters, with words alphabetically arranged; days of the week, months of the year, and States of the Union, etc. No. 3, sentences, alphabetically arranged from the letter A to Z. No. 4, Names and addresses of well-known city firms. No. 5, Fine hand for ladies. Price 12 cents each.

Goldsmith's Gems of Penmanship; a fine exhibition of the author's skill and genius. One quarto volume. Price (reduced) \$2.00.

Mr. Oliver B. Goldsmith, the author of this System of Penmanship, stands preëminently at the head of his profession. For twenty years he has pursued successfully the teaching of Penmanship at his Academy on Broadway, New York, receiving for five years the award of the American Institute, for the best specimens of off-hand penmanship, with numerous testimonials of his skill and genius from all parts of the country.

His System, the result of his twenty years of practical attention to the Art of Penmanship, is now first offered for the use of Public and Private Schools, Academies, and Families, and the Publishers are confident that the numerous teachers and friends of education throughout the land will be glad to receive and adopt for practice the beautiful and practical handwriting of so accomplished a penman.

The Copies are exact fac-similes of the author's own hand-writing, engraved in the best manner on steel, and the quality of the paper, and clearness of print, are intended to be superior to that of any books of the kind in use either in America or Europe.

The Series is comprised in five books, a number fully ample for the use of schools for either sex. It is proposed at some future time to add two or three books expressly for the use of ladies in the higher classes of our schools and seminaries.

Goldsmith's System of Double Entry Book-Keeping.

By OLIVER B. GOLDSMITH and WILLIS J. RENVILLE. A full and clear exposition of the principles of the science, with practical examples and illustrations of the rules and forms required in keeping books in all descriptions of business. Comprehending also a complete Key to Journalizing, and a business Lexicon, containing

definitions of various mercantile terms and phrases. One octavo volume. Price 75 cents.

The System developed in this volume is clear enough to be readily understood, practical enough to be applied with perfect facility by all persons, and sufficiently comprehensive to cover all the varieties of business and all the transactions involved in domestic and foreign commerce. It also exhibits all the best forms of applying them. It embodies, in fact, the plan which is pursued in the Writing and Book-keeping Academy of Mr. Goldsmith, an institution which has numbered among its students some of the most accomplished accountants in the country.

The work is couched in plain mercantile language, and great pains has been taken to show the shortest and straightest road to every desired result.

It is hoped that the manner in which this volume has been prepared, will convince all who examine it that no speciality of talent is necessary to constitute a good practical book-keeper.

PALMER'S BOOK-KEEPING.

Palmer's Practical Book-Keeping. By JOSEPH H. PALMER, A. M., Instructor in New York Free Academy. 12mo. pp. 167. Price 67 cents.

Blanks to do. (4 numbers), each 20 cents.

Key to do. Price 10 cents.

In this Treatise are given, by a series of articles, the elementary principles of Book-keeping, accompanied with suitable forms and illustrations. A choice selection of varied and extensive transactions, progressively arranged, are then given to the learner as exercises, which he is required to perform according to the references which accompany them. The record of transactions is so arranged as to enable the learner to close and re-open his books several times, thus securing a thorough acquaintance and practice in opening, conducting, and closing accounts, and also in exhibiting a periodical statement of the business.

The volume closes with a concise Treatise on Business Affairs, with forms, marginal analysis, commentary, and glossary. The subjects are chiefly Property, Real and Personal; Conveyancing, Agreements, Mortgages, Assignments, Wills, Apprenticeship, Partnership, Citizenship, Patents, and Copyrights.

This work is adopted by the Boards of Education of the cities of New York and Brooklyn, where it is generally used in schools and recommended by teachers. It is also recommended by accountants of prominent commercial firms, and the Press.

DODD'S MATHEMATICAL SERIES.

Dodd's Elementary and Practical Arithmetic, in which are various improvements in arrangement. Price 50 cents.

Dodd's High School Arithmetic. Price 84 cents.

Dodd's Elements of Algebra. Price 84 cents.

Dodd's High School Algebra. Price \$1.50.

Key to Arithmetics. Price 38 cents.

Key to Algebras. Price 84 cents.

Dodd's Elements of Geometry and Mensuration. Price \$1.00.

Dodd's Elements of Trigonometry, Plane and Spherical, with applications to Heights and Distances, the Areas of Polygons, SURVEYING, NAVIGATION, and the Solution of Astronomical Problems. Full Tables Price \$1.25.

The Arithmetics of this course follow the middle ground between the old "rule and figure" system and the modern "inductive" attempt to teach every pupil to *make* Arithmetic. The definitions underlying the rule are first stated, illustrated, and questioned upon; then the Rule, with an example under it, worked out and fully explained; these are followed by a complete *variety* of practical exercises. At the end of each chapter are appended Miscellaneous Exercises of a more complicated nature, which embrace all the principles and processes of the chapters with which they are connected. In connection with these are also explained the most useful *Abbreviated Methods* of calculation.

The High School Arithmetic is made by adding to the Elementary such subjects as are deemed necessary for a more complete mathematical education. Every paragraph is numbered, and reference to previous principles is kept up throughout. In the concluding chapter the Application of Mathematical Probabilities to Life Annuities and Life Insurance has been treated in a demonstrative manner.

The Algebras aim at the most methodical *arrangement*, the clearest *expositions*, the best elementary *exercises*, and the most varied and useful *applications*—in all these respects presenting some *new features*.

The Geometry is well worthy of the attention of teachers on account of its simplicity, exactness, and completeness.

The Trigonometry gives full descriptions of mathematical instruments for school use, with numerous applicatory problems, and full tables of logarithms, etc. &c.

BENEDICT'S ALGEBRAS.

Benedict's First Book in Algebra. Pp. 230. Price 75 cents.

Benedict's Algebra. 12mo. Pp. 304. Price \$1.25.

Benedict's Key to Algebra. Pp. 207. Price \$1.00.

By J. T. BENEDICT, Prof. of Civil Engineering, N. Y. Free Academy.

This work (the Algebra) possesses the rare merit of being both scientific in the discussion of Algebraic principles, and thoroughly practical in their application. To show the estimation in which it is held by those who have examined it, it is only necessary to say, that within six weeks from the time of its first publication, a second edition was required to supply the demands of the teachers in New York city alone.

Benedict's First Book consists of the first twelve chapters of "Benedict's Algebra," and is designed for the second and third classes in New York Public Schools.

"I of course desire to have in my school the best text-book upon any subject that I am called upon to teach. During many years' service as teacher in the Grammar Schools and in the Normal Schools of this city, I have had occasion to examine carefully the various class-books in *Algebra* in use. Many of these have excellent points, yet ALL are more or less deficient in some important particulars.

"I am greatly pleased with Professor Benedict's new work; it is the only one to which I can give my entire and hearty approbation. I have subjected it, both in the Grammar and Normal Schools, to the best of all tests, the *class-room*, and I am pleased to be able to say that it has there fully sustained the very favorable impression derived from perusing it.

"It abounds in examples, and these are so arranged as to enable the teacher to select at a glance a question involving any particular principle or device — similar examples being placed together. Each of these groups has its questions arranged in the order of their difficulty, commencing with the simplest forms, and is preceded by an example wrought out and concisely explained. The same order is observed throughout in the *sections* of the *subject*. The teacher may thus give either a very *full* course of Algebra elements, or one as *limited* as may be thought desirable.

"It is difficult to particularize, among its many good points, those parts most worthy of special commendation. To the teacher of Algebra, it is enough to say, that the chapters on the four rules, Factoring, Radical, and Quadratics, will, upon examination, be at once declared unrivalled." — *Thos. F. Harrison, Prin. Grammar School, New York.*

"As a work for general instruction, Benedict's Algebra recommends itself as the best extant. Students pursuing an exhaustive study of Algebra will probably avail themselves of the methods and artifices of French and German Mathematicians; but for school use, and where but one book is employed, this has undoubtedly no superior. Among the noticeable features are the scientific character of the arrangement — the evolution of

principles being strictly organic and logical — the clearness of the presentation, and the copiousness of illustration. These are qualities that entitle it to, and, we doubt not, will give it a wide popularity.”—*Geo. W. Clark, Esq., Principal Sen. Dep. Mt. Washington Collegiate Institute, New York.*

THOMSON'S LAWS OF THOUGHT.

An Outline of the Necessary Laws of Thought: A TREATISE ON PURE AND APPLIED LOGIC. By WILLIAM THOMSON, D. D., Provost of the Queen's College, Oxford. 1 vol. 12mo. Cloth. Price \$1.00.

This book has been adopted as a regular text-book in Harvard, Yale, Rochester, New York University, etc.

“I am glad to see an American edition of ‘Thomson's Outline of the Laws of Thought,’ and one, too, which equals, even in outward appearance, the English copy. In my opinion, it is the most useful and satisfactory of the many treatises on logic which have appeared within the last few years. Though not expressly designed and arranged for use as a text-book, few teachers will object to it on this account; many, indeed, will prefer it, as it has less of the character of a book made to order.”—*James Walker, Ex-President of Harvard College.*

“It is one of the most important treatises upon logic that have appeared in England during the present century, and as such received the high commendation of so severe a critic as the late Sir William Hamilton. Clear, comprehensive, and accurate, it is admirably adapted for use as a manual of instruction, while it contains enough of the fruits of successful research and original speculation to give its author rank among the discoverers in science. Four editions of the work have already appeared in England, where it has also been adopted in many seminaries as a text-book; and it needs only to be known in order to be received with equal favor in the United States.”—*Francis Bowen, Professor of Logic, etc., in Harvard College.*

Enos's Intellectual and Practical Arithmetic. 12mo. Price 25 cents.

The natural arrangement of the text, and the logical mode of solving the questions, are peculiar and important features belonging to this book alone.

“I have carefully examined Enos's Intellectual and Practical Arithmetic, and am so well satisfied with the superiority of the work that I intend to recommend its introduction into the schools of Iowa.”—*Maturin L. Fisher, Esq., Supt. Public Instruction, Des Moines, Iowa.*

The School and Family Dictionary and Illustrative

DEFINER. By T. H. GALLAUDET and HORACE HOOKER. 16mo.
221 pages. Price 42 cents.

Few things are more important in the early education of youth, than to teach them accurately the meaning of words, and few things are more difficult. Many words, by daily use in the family and in the common intercourse of life, are better understood by every intelligent child of eight or ten years of age, than they can be from any mere definition.

In addition to this, many of the most difficult words, including the technical and scientific, had better be reserved till the mind is more developed and fitted to comprehend them, and till the comparatively easy words needed in defining them are well understood.

Between these *two great classes* there is *another*, to which the attention of the learner in studying the definitions should first be directed; and when he is well acquainted with it, the attainment of the higher class will not be found difficult. It is principally words of this *middle range* which the authors have introduced into this book.

Another peculiarity of this work consists in its *definitions and illustrations*. In the definitions the authors have aimed at simplicity and clearness, avoiding what they conceive to be a great defect—the defining of one word by another, often still more difficult, and then the defining of this latter one by the very word which it had been used to define. For example, as when the scholar is told that *to abandon* means *to forsake, to desert*; and that *to forsake* is *to abandon, to desert*; and that *to desert* is *to abandon, to forsake*. . . . And even when the definitions have been made as simple as possible, the proper meaning and use of most words can be taught effectually only by *illustrative examples*. This is the very way, indeed, in which children, in the common intercourse of life, learn their mother tongue; and it seems essential, therefore, that this should be one of the striking features of a dictionary for schools and families. In this respect, it is believed, this work has peculiar claims upon the attention of teachers and parents. The *illustrations* have been prepared with great labor, and in making them it has been the design of the authors, while showing the proper meaning and use of words, to communicate valuable knowledge, to cultivate a correct taste, and to impress moral truth. Historical facts and dates, references to the Sacred Scriptures, with prudential maxims and precepts adapted to the young, pervade the whole.

The Elements of Intellectual Philosophy. By FRANCIS WAYLAND, D. D. 1 vol. 12mo. Price \$1.25.

This clearly written book, from the pen of a scholar of eminent ability, and who has had the largest experience in the education of the human mind, is unquestionably at the head of text-books in Intellectual Philosophy. It contains the substance of Lectures during several years, delivered to the classes in Intellectual Philosophy in Brown University. Being intended to serve the purposes of a text-book, the important truths of the science have been presented and illustrated, rather than the inferences which may be drawn from them, or the doctrines which they may presuppose. The compass of the volume is adapted to the time usually allotted to the study of this subject in the colleges and higher seminaries of our country. It is divided into eight chapters on the following subjects:—The Perceptive Faculties—Consciousness, Attention, and Reflection—Original Suggestion, or the Intuitions of the Intellect—Abstraction—Memory, Reasoning—Imagination—Taste—also an Appendix of interesting matter. The author's practical suggestions on the cultivation of the several faculties of the mind, aiding the student's efforts to discipline and strengthen his intellectual energies, and the numerous references to books of easy access, specifying the places where topics treated of are more fully discussed, make this book a valuable addition to the readable books of any teacher or professional man.

The Exhibition Speaker and Gymnastic Book, containing Farces, Dialogues, and Tableaux, with Exercises for Declamation, in Prose and Verse. Also a Treatise on Oratory and Elocution, Hints on Dramatic Characters, Costumes, Position on the Stage, Making up, etc., etc., with illustrations. Carefully compiled and arranged for School Exhibitions, by P. A. FITZGERALD. To which is added a complete system of Calisthenics and Gymnastics, with instructions for Teachers and Pupils, illustrated by numerous engravings. 1 vol. 12mo. 75 cents.

"There are books enough containing exercises for Speaking; but, till Mr. Fitzgerald brought forth this compilation of instructions, we have witnessed no effort to inform pupils how to deliver their parts artistically, and at the same time naturally. . . . The author has taken great care in the matter of elementary instruction. . . . There have also been given valuable directions in the matter of gestures, which every schoolboy should read and commit to memory. Very full instructions are given in gymnastics and calisthenics. We apprehend a general rising of public sentiment to this department. . . . The sale of Ten Thousand copies evidences that it has been found to have a value which other 'Speakers' do not possess."—*New York Teacher*.

Universal History. By E. P. PEABODY. Arranged to illustrate BEM'S CHRONOLOGICAL CHARTS. Complete in one vol. Quarto, with Blanks. Price \$1.25.

After ample experiment of their efficiency, the Charts of Gen. Bem were furnished by order of the government to all the high schools and colleges in France. The use of these charts by the plan and full illustrations of this book will give students in history such a mastery of the subject as cannot be obtained by the most careful study of events and dates according to the methods often pursued. From the text of this book the student is required to fill up the charts with colors. As he progresses, each color will disseminate the career of a nation in time as far as there is extant chronological data for it, and thus the history of different nations will form of one chart a symmetrical picture. Thus the outlines of history are presented to the eye for future reference and additional data by the student, as pupils now so profitably produce geographical maps from the detailed description of books. The result is their own work, and an interesting proof of their intelligence, attention, and discrimination.

Teachers are invited to an examination of this method of illustrating the studies of their scholars in history, when it will be seen that the time given to this study may be made interesting and very profitable to themselves and the pupils under their charge.

Fitch's Mapping Plates; designed for Learners in Geography, being a collection of Plates prepared for Delineating Maps of the World, and Countries forming its principal subdivisions, viz., 1. The World. 2. United States. 3. North America. 4. South America. 5. A State. 6. Mexico and Guatemala. 7. Great Britain and Ireland. 8. Europe. 9. Southern Europe. 10. Germany. 11. Africa. 12. Asia. 13. Atlantic Ocean. 14. Pacific Ocean. By GEORGE W. FITCH. Price 30 cents.

The attention of the public is respectfully called to the above plates, and to the advantages they are calculated to afford in the study of Geography. They are prepared with the suitable and requisite lines of latitude and longitude, for maps of the world, and the countries forming its principal subdivisions, and are designed to be used in connection with the school atlases in common use, as well as with outline maps. With these Plates, the pupil is able to commence, at once, the delineation of maps, without the difficult and perplexing labor of drawing the meridians and parallels—a labor which generally consumes the time of both teacher and scholar, to an extent entirely disproportionate to any good which may be derived thereby.

Hazen's Speller and Definer. The Speller and Definer, or Class-Book No. 2, designed to answer the purposes of a spelling-book, and to supersede the necessity of the use of a dictionary as a class-book. By E. HAZEN, A. M. Price 20 cents.

☞ Over 500,000 volumes of this book have been sold.

This Speller and Definer was first published in 1829, and has stood the test of the school-room successfully to the present day. It was thoroughly revised by the author in 1857, and is now called superior to any other book of the kind in use. At the time it was first published, it was the practice in nearly all the schools to try to commit to memory Walker's School Dictionary, but through the influence of this book dictionaries in this application were nearly banished in a few years.

Hazen's Symbolic Spelling Book. With 553 Cuts. Price 20 cents.

HAZEN'S SYMBOLIC SPELLING BOOK. Part 1st, 288 Cuts. Price 10 cents.

HAZEN'S SYMBOLIC SPELLING BOOK. Part 2d, 265 Cuts. Price 12 cents.

The Symbolic Speller is intended to precede Hazen's Speller and Definer. From the reading lessons of this spelling book, pupils may learn the meaning and application of a great number of words which will serve as a good foundation for the explanation of others.

Miles's United States Speller. A new work, containing upwards of fifteen thousand of the most common English words. Price 13 cents.

The author of this work is an old Practical Teacher. The arrangements and classification are original and strictly progressive; and in Orthography and Pronunciation, the best standard authors, writers, and speakers, have been consulted.

These Spelling-Books are designed to accompany Webb's Series of Normal Readers.

Kirkham's Elocution. 12mo. 357 pages. Price 75 cents.

This is one of the best Elocutions ever printed. It contains a varied and interesting selection of very useful matter, carefully arranged. It is a standard work, and now used in some of the best schools in the country; among which are the Normal School, Philadelphia; Lower Canada College; Toronto Academy, etc.
